

Solar Systems of Schweizer:

Supplier warranty for Solrif® roof integrated PV mounting system.

Ernst Schweizer AG provides a 10-year warranty on materials supplied for the Solrif® roof integrated PV mounting system.

The functionality and reliability of the materials supplied by Ernst Schweizer AG is guaranteed. The warranty for the (watertight) framing is provided by the party that made the framing (Solrif processor). If the framing is not made by Ernst Schweizer AG, then the (watertight) frame is excluded from the warranty of Ernst Schweizer AG.

Limitation of Warranty and Liability

- Any wear and tear of the materials that does not impair the functionality of the roof integrated PV mounting system is not covered by this warranty.
- Our warranty and liability are limited to the costs of materials and delivery.
- The Solrif processor that makes the photovoltaic modules combined with Solrif® is responsible for providing the warranty and performance guarantee for such modules.
- The warranty does not cover damage to and/or wear and tear of the product caused by operating, storing, installing or using the product incorrectly.

General Terms and Conditions

In all other respects, the General Terms and Conditions (GTCs) of Ernst Schweizer AG shall apply (particularly sections II. D. and E. regarding the warranty and liability). The GTCs can be viewed at any time under www.ernstschweizer.ch/agb.

Certifications

The Solrif® in-roof PV assembly system has been certified by the technical inspection service TÜVRheinland® (Certificate No. R 60150494, TÜVdotCOM). The functionality of the materials for Solrif® and its accessories is specified and described in the documentation for that certificate.

For certification under IEC 61215 (terrestrial PV modules), the PV modules with Solrif® must successfully pass the required supplementary tests by the appropriate certification body. That is the responsibility of the Solrif processor.
